Why do foods and drugs interact?
Dr G. B. West explains on p 160

Professor F. Fastier (right), head of pharmacology department, Otago University, New Zealand, with compatriot Mr Ian Edmundson in the pharmacy unit of Glaxo Laboratories Ltd, Greenford, Middlesex. Professor Fastier, on a six weeks' study tour of Britain, was renewing an acquaintance made many years ago when Mr Edmundson worked in Dunedin

Hospital claim is £3,500—now for Noel Hall

The report of the Noel-Hall working party on hospital pharmacy is now being put into its final form for submission to the Secretary of State. A draft was approved by the working party at a meeting—understood to be the last—on January 30.

Meanwhile, hospital pharmacists are pressing on with their claim for increased salaries. Particular emphasis is being placed on raising the rates in career grades with a new top basic salary for category V chiefs of £3,500, against £2,327 at present.

The claim understood to have been put before the Whitley Council by the employees' side is as follows:

Pre-registration student, £1,000; Pharmacist, £1,250-1,600; Senior pharmacist, chief cat. I, £1,500-1,950; Deputy

chief IV, chief II, £1,600-2,000; Deputy chief V, chief III, £1,800-2,500; Chief IV, £2,250-2,950; Chief V, £2,750-3,500 Group allowances £100, £200, £300, £400. Teaching hospital allowances; chief pharmacists £300, £400, £550; deputy chiefs £100, £125, £150.

More threaten to resign

The East Midlands branch of the Guild of Public Pharmacists—representing hospital pharmacists in Nottingham, Derby, Lincoln, Leicester and surrounding areas—met on February 2 and unanimously passed a resolution aligning itself with the threat by Liverpool pharmacists to resign from the service if there is no "satisfactory outcome" to the present Whitley Council negotiations.

The Liverpool pharmacists unanimously agreed at their annual meeting on January 22 that unless the present claim was met in full they would resign their posts and seek employment elsewhere.

About half the branch's 70 members were present at the meeting.

The general secretary of the Guild has made a statement supporting the Liverpool members.

Partial closed-shop at Boots

Under an agreement signed by Boots Pure Drug Company Ltd and the Union of Shop, Distributive and Allied Workers all new full-time employees in warehouse and production departments will be required to join and remain members of the union while employed by the company.

The agreement relates to sites where USDAW have a clear majority of members and applies to the company's factories and warehouses at Nottingham, Aldershot, Heywood and Airdrie for all new employees coming within the scope of the Drug and Fine Chemical Joint Conference Agreement.

Welsh committee are named

The composition of the new General Pharmaceutical Committee in Wales has been decided by the Central NHS Committee following the receipt of nominations from the local Pharmaceutical Committees concerned.

The representatives on the "caretaker" committee will be:

NORTH DIVISION: Mr J. Bar-

clay Hough for Cardigan, Montgomery, Merioneth, Caernarvon and Anglesey; Mr C. H. Brunning for Denbigh with Flint.

SOUTH DIVISION: Mr J. Richards for Glamorgan with Merthyr; Mr J. R. E. Shelley for Newport and Monmouth with Brecon and Radnor; Mr L. Kaye for Cardiff, Mr W. A.

Evans for Swansea with Carmarthen and Pembroke.

Members already appointed to represent the Central Committee, the Company Chemists' Association and the Co-operative Union are: Mr G. T. M. David, Mr D. H. Maddock, Mr J. T. M. Ross and Mr M. L. Lord (see *C&D*, January 17, p 43).

The first meeting of the committee is to be on March 12. Details of a scheme for Pharmaceutical Committee representation on the permanent committee, based on the number of prescriptions dispensed, will be circulated to all Welsh committees for their consideration.

Over-charged for Horlicks

A recent survey carried out for Cadbury Schweppes has revealed fairly widespread instances of over-pricing by a number of leading but unnamed grocery chains of certain packaged food items.

While 88 per cent of one multiple outlets were selling Horlicks below the recommended price, 81 per cent of another's were pricing above it.

The tendency was found for the fast-moving lines to be over-priced and the slow lines generally to have the largest price cuts.

Moves on compulsory patents

An application for a compulsory licence to make frusemide was lodged last week with the Patents Office by DDSA Pharmaceuticals Ltd. At present frusemide is marketed under the trade name Lasix by Hoechst Pharmaceuticals Ltd, holders of the patent.

DDSA after a three-day hearing last month were successful in obtaining a compulsory licence to make chlorthalidopoxide which is covered by patents held by Roche Products Ltd who market it as Librium.

An application to make quinazoline—an intermediate in manufacture of chlorthalidopoxide was also granted.

Roche have recently received from Berk Pharmaceuticals Ltd an application for licences to make or import chlorthalidopoxide and diazepam (marketed as Valium).

Berk's action, according to

an article in the *Daily Express* on January 29, had "caused a major row in the Association of the British Pharmaceutical Industry being the first time a member company had decided to 'pirate' a valuable drug."

The ABPI's views on the subject of "pirating" drugs, made possible through section 41 of the Patents Act are well known. Briefly, they deplore companies taking the fruits of other companies' research efforts before time has been allowed for the original discoverer to recoup his research expense. "Pirating," they say, will lead to companies cutting back on research to the detriment of medicine and of exports.

At present a report by the Bank's Committee on the revision of present patent law is awaited anxiously by the industry.

Comment p 167.

No ruling on labelling of tonics

In the House of Commons this week, Mr A. MACDONALD asked the President of the Board of Trade if he would introduce legislation requiring all tonics sold to the public, other than on prescription, to carry the manufacturers' name and address on the carton or bottle.

MRS GWYNETH DUNWOODY (Parliamentary Secretary) replied: "Although we have powers to impose such a requirement, I think that the suggestion would be more appropriately considered by the Secretary of State for Health and Social Security in the context of the Medicines Act, 1968."

MR LAURENCE PAVITT asked the Secretary of State for Social Services what would be the estimated annual saving to the National Health Service if the manufacture, preparation, importation, sale and distribution of amphetamines and their derivatives were prohibited.

DR JOHN DUNWOODY (Parliamentary Under Secretary) replied: "Because of the consequential increase in the use of alternative drugs I would expect there to be little, if any, saving."

First-choice pharmacy

A total of 1,335 candidates gave pharmacy as their first choice for study when applying for entry to a university through the Universities Central Council on Admissions in 1969. That compares with 1,196 passing through the UCCA system in 1968.

The figures are given in the Council's report for 1968-69 which shows also that 692 candidates were accepted for places—the UCCA deals only with applications to universities, not to those studying for CNA degrees.

When clearing took place in September—that is, allocating those students not already offered places—only 56 of 228 students with GCE qualifications were actually accepted by universities. Similar tables for other disciplines, however, show "the continuing shortage of well-qualified candidates applying for courses in science and technology."

UCCA seventh report, 1968-69, PO Box 28, Cheltenham, Glos GL50 1HY, price 8s.

"Calypso," a two-ton killer whale at Cleethorpes Zoo, Lincolnshire—the only female one in captivity in Europe—was kept alive in January on Wellcome's protein "Protogest," manufactured at the group's research laboratories at Beckenham and distributed by Burroughs Wellcome Veterinary Division at Berkhamsted. The Protogest was supplied from Dartford in response to an urgent phone call, and reached the whale the same day, by passenger train. Above, "Calypso" receives a cooling splash-over in the depths of winter

Ministry warns on uncleared L-dopa

The Department of Health has issued a statement strongly advising doctors against the use of L-dopa from any source that has not been approved by the Committee on Safety of Drugs.

The statement was prompted by reports that Chemica Laboratories Ltd, of East London were to release supplies of L-dopa in Britain without obtaining the Committee's approval.

The Department says that although the company was advised in October 1969 about the information and documentation that would be required before clearance could be given for the clinical use of their material, no information has been received of any kind and therefore nothing is known of the quality of the material.

In confidence

"Chemica Laboratories apparently believe they cannot give manufacturing procedures for fear of these reaching competitors. The fact is that the Committee treats all information submitted to it in strict confidence."

Mr M. Sinclair, managing director of Chemica Laboratories confirmed to the *Chemist & Druggist* on February 2 the reason given for his not supplying information.

He had, he said, approached the Department pointing out that his material was both cheaper and purer than that of Roche but when asked for his manufacturing process he had withdrawn. He could see no good reason for the Department's request and, as he did

not possess a patent, he was not prepared to divulge it.

Mr Sinclair claimed that his material was "99.9 per cent pure." The 0.1 per cent of impurities would be declared to a purchaser, he said. The company had been manufacturing for 14 months and has sold several tons of L-dopa abroad. Several hundred inquiries had been received in Britain, the majority of them from doctors.

Two more companies, Brocades (GB) Ltd and Ward Blenkinsop Ltd have now received clearance from the Committee for the clinical study of their L-dopa in the management of Parkinsonism.

The material at present being used in Medical Research Council trials is supplied by F. Hofmann-La Roche.

Move for pay equality

The Equal Pay (No. 2) Bill, which received its second reading in the House of Commons last week is unlikely to have much effect on retail pharmacy beyond that already envisaged in the current JIC salary claim (*C&D*, October 18, 1969, page 345)

The object of the Bill is to eliminate discrimination on grounds of sex in remuneration and other terms and conditions of employment, by

December 29, 1975 it is said.

Clause 3 provides for the removal of specific discrimination between men and women in collective agreements.

The area where the Bill would touch most directly on pharmacy would be in the payment of dispensing and shop assistants. The JIC claim under consideration provides for a 40s a week increase for females compared with 20s for men—which would effectively create parity.

Hold-up for factory

Beecham's Research Laboratory, who earlier this month obtained Worthing town council's permission to extend their factory in the town, will not be able to use the new buildings until something is done to stop a smell claimed to be coming from the factory.

Conditions to be attached to outline planning permission granted for an extension to the fermentation building and the erection of a new extraction building include a proviso that the new buildings cannot be used until either the present "smell-killing" plant has been extended to cater for the new extensions or another similar "smell-killing" plant has been built. Beecham will also have to take "all reasonable steps" to reduce odours coming from their factory.

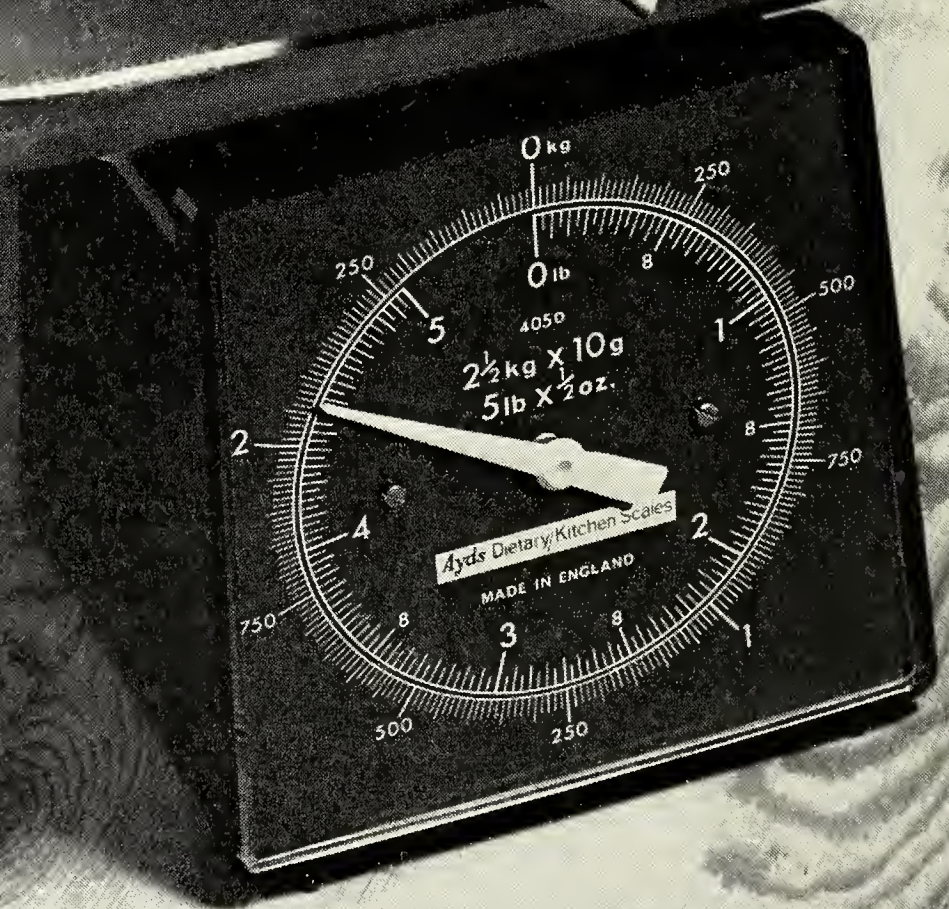

Other conditions relate to car parking and Planning Act requirements. About 18 months ago, when Beecham's first applied for planning permission for extensions, the council refused to consider them until something had been done about the smell.

Ayds are low-calorie, vitamin-enriched, vanilla flavoured cubes which help you maintain a controlled diet by taking the edge off your appetite. Ayds contain no drugs, and are effective only as part of a regulated diet.

New
Mint
Flavour

NET WEIGHT 1 LB. 8 OZ. (680 GRAMS)

Dietary scales give Ayds a powerful lift off for 1970.

Last year, Ayds proved themselves to be the fastest-growing slimming product sold through chemists.

And in 1970 Ayds will grow even stronger. To start with, we've got a special dietary scales offer which is certain to be an instant success for both you and your customers.

It works like this. Each of the scales will go for 28/- plus the proof of purchase from one pack. That's a saving of 10/11 off the normal price.

They're remarkably well-made scales and weigh from 0.5 lbs. in $\frac{1}{2}$ ounce and metric calibration. Which means they can be used for regular family cookery *and* also for dietary use. And with every set we'll give away a special calorie chart.

But this offer is only the start of a bigger and better year for Ayds. There'll be other equally enticing promotions to boost your sales. And of course our compelling testimonial advertisements will continue all the year round.

So be certain to build up your stocks and displays *now*. And remember that Ayds are sold through chemists only. For full details of our scales offer, including how you can obtain your own free set, complete the coupon below and send it to us today

Ayds.

**To: CUTICURA LABORATORIES LIMITED

Contract proposals get no support in Central Committee

North-east London Pharmaceutical Committee's proposals for a new NHS contract, and re-constitution of the Central NHS Committee, have met with little support in the Central Committee itself.

The proposals were considered by the Committee "in detail" on January 27 when it was pointed out that all 14 members of the Committee, except for one company chemist member, were members of local Pharmaceutical Committees and 11 of these were NPU Executive Committee members elected by postal ballot on a regional basis every three years.

There was thus no truth in the suggestion that the Committee was unrepresentative of local Pharmaceutical Committees or that most of its members were not in effect elected regionally.

All major decisions on remuneration and other matters were subject to ratification or rejection by conferences of representatives of all local Pharmaceutical Committees from which the Committee took its mandate.

'Vagueness' charge

Turning to the subject of the "tripartite contract" Mr G. T. M. David (chairman) said that the Committee was hampered in its discussion by the vagueness of the N.E. London proposals.

The secretary (Mr J. Wright) outlined the text of an address he had given at an NPU branch meeting in Leeds which had dealt in detail with the origins of the present contract. The current basis of payment did not date back to the beginning of the Health Service, as was claimed, but took its origins from the 1964 agreement with the Ministry of Health which involved a broader arrangement incorporating an annual review procedure for the constant up-dating of costs. The Committee also believed that there were elements in the suggestions which would be welcomed by these who wanted an opportunity of introducing a salaried service.

The Committee is to press the Department to agree that there should be no discounting of prescriptions dispensed during December 1969 and

January 1970. After reviewing recent figures and considering the attitudes of contractors and the Department to the present method and rates of discounting, the Committee decided to consider the question again at its next meeting. It would then have available statistics on the discounts received in respect of those proprietary preparations listed by the Department as being responsible for a major portion of the proprietary drug bill.

Penal effects

The Committee had received many representations about the expected penal effects of the discounting in respect of prescriptions dispensed during December and January, and agreed that pharmacists had frequently been unable to obtain the normal larger packs during the influenza epidemic. They had spent much unprofitable time in attempting to obtain supplies from wholesalers.

The total discount received from manufacturers would be less than usual, whilst the total net ingredient cost and, therefore, the discount recoverable on the sliding scale would be much higher than normal.

Separate fee

The Committee decided to make representations to the Department for a separate professional fee to be paid for each person receiving medicaments where prescriptions for more than one patient were written on a single Form EC10.

The Committee again considered the high percentage of drugs and galenicals listed in the Drug Tariff which were not used in current medical practice, and the unrealistic nature of many of the Tariff basic packs. The Committee decided to ask the Department to supply details of prescribing frequency of Tariff items.

It was agreed that representations would be made to the Department for the deletion of potassium effervescent tablets from the drug testing scheme.

The pharmaceutical division of A. Wander Ltd recently sponsored a cheese and wine party at Kings Langley, Herts, on behalf of the Watford and District Combined Ambulance League who were celebrating their 15th anniversary.

Among the 200 guests attending was the mayor and bailiff of Hemel Hempstead, Councillor John Doyle (right) who is seen talking with Mr Mark Davis (left), marketing manager of A. Wander, and Mr Alan Melton, sales promotion manager

Irish news

Services survey for the IDA ?

The possibility of engaging an outside consultative body to compile a report or study of pharmaceutical services in the Republic is to be explored by the Irish Drug Association Executive.

That decision was taken at the Executive's January meeting in Dublin. It was felt the exercise would provide most valuable information to all connected with pharmacy. The secretary was instructed to deal with the matter and report back.

During discussion of opening and closing hours for pharmacies (C&D last week, page 121), it was made clear that approaches to the Department of Health in that connection will be made by the Joint Negotiating Committee, which includes members of the Pharmaceutical Society of Ireland's Council, and not by the IDA Executive alone (as reported in this journal on October 25).

A deputation comprising the president, Mr M. B. Brophy, with Messrs W. J. Gardner, J. Kennedy, J. P. Burke, J. W. O'Farrell and T. B. O'Sullivan, was appointed to meet the Wholesale Drug Federation of Ireland to discuss matters of current concern.

Veterinary safety scheme mooted

The Pharmaceutical and Allied Industries Association "have in hand" recommendations for a veterinary products safety precautions scheme.

Announcing that at an Association luncheon in Dublin on January 21 Mr M. Giblin, director, I. P. Whelehan, Son & Co Ltd, and chairman of the Association's B division, which is concerned with veterinary medicines, said it was hoped to present their ideas to the Ministries of Agriculture and Health in the near future.

The scheme would possibly evolve on the lines of the National Drugs Advisory Board. The Association hoped the Government would consider regulations in line with the recently-established Brussels code for Common Market countries which allowed the use of low levels of antibiotics in feeding stuffs.

Speaking at the same luncheon Dr A. Spinks, research director, ICI pharmaceuticals division, said it would be helpful if some countries placed more reliance on foreign evidence concerning the safety and efficacy of new drugs.

Out of his division's 1969 research expenditure of about £3 million, about £300,000 was spent on toxicity testing of new drugs.

C.D.I

the
new key
to the oral
treatment
of diabetes

Daonil[®]

- maximum efficacy
- minimum dosage
- optimum tolerance

Hoechst-world leaders in diabetes research introduce

Daonil[®]

(glibenclamide)

a highly effective oral antidiabetic agent

Extensive chemical and pharmacological research involving examination of over 8,000 compounds revealed one which has proved to be the most active and least toxic antidiabetic agent so far produced. Its name is DAONIL.

Maximum efficacy

The hypoglycaemic activity of DAONIL was first shown in animal experiments where a dose of only 0.28 mg/kg reduced blood sugar levels by nearly 30%. In subsequent world-wide clinical trials on over 5,000 patients DAONIL provided satisfactory control of blood sugar in 80%. Control was classified as excellent or good in 70% of cases.

Excellent	37.4%
Good	32.2%
Adequate	18.7%

A single daily dose proved sufficient.

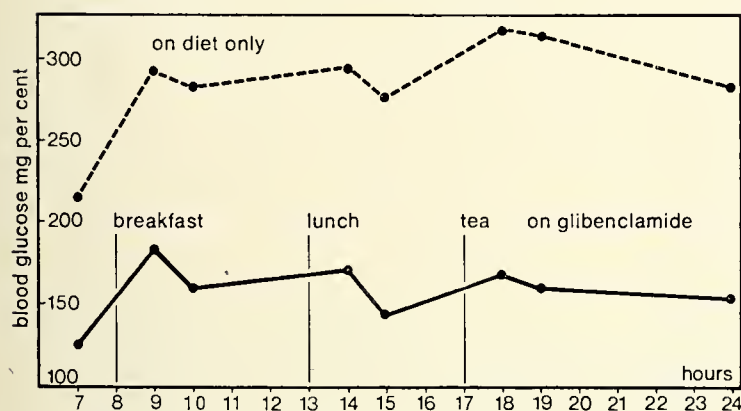

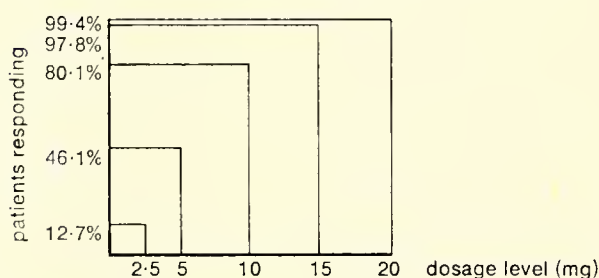

Fig 1 Blood glucose profiles throughout the day in 25 patients on diet only and then following therapy with glibenclamide at breakfast.

Thirty-six investigators compared DAONIL with chlorpropamide. Eighteen considered the two drugs to be equally effective but fourteen found DAONIL to be superior in lowering blood sugar.

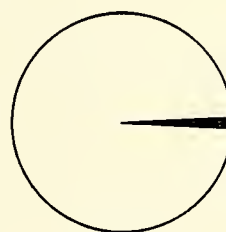

Minimum dosage

Very small amounts of DAONIL bring about the required degree of blood sugar control. Over 90% of suitable patients could be stabilised using a dosage range of 2.5–20 mg. confirming DAONIL as the most active antidiabetic agent available.

Optimum tolerance

In a chronic condition such as diabetes any treatment must be well-tolerated by the patient. In extensive clinical trials side-effects sufficiently severe to warrant withdrawal of therapy occurred in only 1.46% of patients.

Gastric irritation	0.52%
Skin reaction	0.47%
Liver	0.0%
Haematological	0.1%
Miscellaneous	0.37%

Presentation:

White oblong tablets each containing 5 mg. glibenclamide, scored in the middle, one half bearing the letters LDI the other, the Hoechst insignia.

PEOPLE

Dr G. B. West, BPharm, DSc, PhD, is joining the teaching staff at Barking Regional College of Technology (a constituent college of the proposed North-east London Polytechnic) where he will lead a team of five staff in teaching and research programmes in pharmacology. Dr West was recently honoured by the New York Academy of Sciences by being elected a Fellow of the Academy, the citation

being "in outstanding recognition for scientific achievement and promotion of science."

Until recently Dr West was head of consultancy services at the British Industrial Biological Research Association. An article by Dr West on drug-food interactions is on p 160 of this week's issue.

Mr John Bentley (29) has scored for the company he heads, Barclay & Sons Ltd, a hat trick in the takeover field. By agreeing terms for the acquisition of Wyleys Ltd (see p 162) the number of wholesale chemists that have been taken over by Barclay in the Midlands is brought to three in under 12 months. First there was Jaynox Ltd, then J. H. Haywood Ltd. Hyde & Entwistle, Belfast, is also a subsidiary of Barclay.

Deaths

Ratner: On January 21, Mr Jack Louis Ratner, proprietor of the Marble Arch Drug and Optical Co Ltd, 40 Edgware Road, London W2. Mr Ratner had been in business in the area since 1935.

Mason: On January 22, Mr John Mason, LPSI, Malahide Road, Donnycarney, Dublin. Mr Mason qualified in 1931 and ran his own pharmacy until disposing of it recently to Mr Alphonsus Dolan.

Grainger: On January 22, Mr Harry Grainger, MPSI, Green Street, Callan, co. Kilkenny, Eire. Mr Grainger qualified in 1913 and conducted his own pharmacy until recently.

Taylor: On January 25, Mr John Gardner Taylor, MPS, 113 Wilton Street, Glasgow NW. Mr Taylor qualified in 1915.

The Xrayser column

Ancient and modern

For the heading to the column this week I have shamelessly borrowed the caption from two of your illustrations in last week's issue (pp. 126 and 128). The stone jar shown in the company profile feature is an old friend of mine and, indeed, only the other day I was wondering where it had gone. I am glad to know that it is still in use. I used it for a number of purposes, one of which was to macerate large batches of vinegar of squill, and I "agitated" it in the manner shown in the photograph.

It was a very versatile piece of equipment, for between macerations it served as a receptacle for powders mixed and sifted in a contraption reminiscent of Mr Heath Robinson. At the time I knew the jar it seemed indestructible, and now I have evidence that my earlier impressions were not all that wide of the mark.

It has found a home in an atmosphere not noticeably different from that in which I knew it, and one day I hope to renew my acquaintance with it, for I feel sure that we should both feel happy in surroundings which are so clearly attuned to our outlook.

The second "ancient and modern" refers to modern shopfitting, heating and lighting, and the hundred-and-one other features which go to make the new pharmacy. Far be it from me to decry the benefits to public and pharmacist, even if in one of the illustrations all that seems to be missing is an illuminated sign saying "To the Trains" — but then, you see, I was brought up in close association with the stone jar already mentioned.

If I were to be seen in such surroundings as those illustrated the words in the title would require no stressing.

Lighting and heating

From the foregoing you will readily deduce that I have known other — if not better — days. I have known pharmacies in which the fall of darkness necessitated climbing with a flaming taper to what was described as an incandescent mantle — and woe betide the hapless youth who approached the task with dash and abandon, rather than prudence and care, for the source of illumination was of a most delicate description.

You may find it hard to believe that the warmth generated from that light, scant as it was, was the only source of heat in the pharmacy apart from a small gas jet which was kept alight for the sealing wax. Judged by today's standards the lighting must have been poor in the extreme, and the installation at a later date of electric light owed less to a desire for progress than to the failure of the local gasworks.

But times have changed, and we work now with good illumination and in a comfortable warmth, which is as it should be, for we still spend a good part of our waking hours in the pharmacy. I have no desire to return to the conditions prevailing forty or more years ago, with the almost inevitable chilblains on hands and feet.

Traffic control

There was no thought given in earlier days to forcing customer traffic to diverge right and left of the entrance by installing three-deck islands to act in some measure as a pedestrian roundabout. People tended to come in by ones and twos, with a specific errand in mind, for the term "impulse buying" was unknown. The difference between the pharmacy and the grocer's next door was self-evident, and it may be that that significant difference was the cause of my feeling, in my schooldays, that I should remove my cap on entering the druggist's, and walk quietly and reverently to the counter. But where is the counter today? Merely a series of islands, with a total absence of "Keep Left" signs!

WHY DRUGS AND FOOD INTERACT

by Dr G. B. West

Reports about dangerous, sometimes fatal interactions between food and drugs are growing in number, and those who work in the field of biological sciences must be ready to devise schemes for their analysis. One of the best illustrations of why such interactions occur is provided by the monoamine-oxidase inhibitors, whose action is considerably modified by the dietary habits of the patient.

Monoamine oxidase (MAO) is an enzyme located within the cells of many body tissues including the brain and other nervous structures. It is present in highest concentrations in the liver, kidney, and gastro-intestinal tract, and is concerned with the oxidative de-amination of a number of biological amines such as adrenaline, noradrenaline, dopamine and 5-hydroxytryptamine (5-HT). Its function probably is to control the intracellular concentration of these amines.

The introduction into medicine of clinical inhibitors of MAO for use as anti-depressants and antihypertensives began when it was found that patients under treatment for tuberculosis with isoniazid or its related compound, iproniazid, showed varying degrees of mood elevation.

Clinical trials followed with other drugs possessing inhibitory actions against MAO and most were found to be effective against psychotic and neurotic depressions. However, a frequent side effect of this antidepressant therapy was postural hypotension (that is, a fall in blood pressure when moving from the supine to the upright position) and other MAO-inhibitors were developed to obtain a more specific effect in hypertensive cases.

Most of the 40 or so modern MAO-inhibitors in use today inactivate the enzyme by forming stable complexes with it. As there are probably multiple forms of the enzyme and more than one form may be present in a single organ such as the brain, the different relative activities of MAO-inhibitors in combating depression can be explained.

Synthesis of amines continues in the presence of the inhibitors, so concentrations within the cells increase considerably. The mood-elevating activity of MAO-inhibitors may be associated with these increases, particularly of noradrenaline and 5-HT. On the other hand, the antihypertensive actions are probably not due to MAO-inhibition but to blockade at sympathetic ganglia resulting in blood vessel relaxation.

The therapeutic effects associated with MAO-inhibition may persist long after the inhibitor has been excreted, as

enzymic inhibition is mostly irreversible and the re-synthesis of MAO occurs only slowly.

Concurrent administration of a MAO-inhibitor and a chemical amine such as amphetamine or ephedrine may precipitate a hypertensive crisis and produce enhanced central excitation when the amine passes the blood-brain barrier. These two amines, like noradrenaline, have mainly a direct action on the tissue receptors and produce contraction of the muscles in the blood vessel walls. Others, like tyramine, act indirectly by releasing noradrenaline from its stores, and this noradrenaline then stimulates the receptors. The hypertensive crises may thus be attributed to overstimulation of the sympathetic receptors.

Inhibition of MAO within the sympathetic nerve endings allows the accumulation of excessive amounts of noradrenaline which when released by amines like tyramine, produce the exaggerated pressor response, central hyperexcitability, and cardiac arrhythmias. Extracellular inactivation of noradrenaline is the role of yet another enzyme, catechol-O-methyl transferase, the activity of which is not usually inhibited by MAO-inhibitors.

Several MAO-inhibitors are chemically related to amphetamine and have amphetamine-like actions which are independent of their MAO-inhibitory activities. When such inhibitors are used alone, spontaneous hypertensive crises have been known to occur. Nevertheless, other MAO-inhibitors which lack amphetamine-like activity are also capable of precipi-

tating spontaneous hypertensive crises. There are therefore difficulties in selecting the most suitable inhibitor for each particular patient under treatment.

Involvement of foods

Amines such as tyramine are present in otherwise innocuous amounts in a number of foods, many of which have been held responsible for the precipitation of hypertensive crises. The main foods involved include cheese (particularly Stilton, Brie, Cheddar and Camembert), yeast extracts (Bovril and Marmite), pickled herrings, chicken liver, chocolate, cream, game, Milo and yoghurt. Tyramine has also been found in beer and wine (particularly Chianti), but generally there are only small amounts.

Normally, tyramine in food is rapidly inactivated either by the MAO in the intestinal wall cells during absorption, or by the MAO in the liver to which blood from the intestine flows before passing into the general circulation.

When the action of MAO is inhibited, inactivation of the tyramine from food does not occur and relatively large amounts pass unchanged into the circulation. This tyramine finally reaches the area of the sympathetic nerve endings where it releases excessive amounts of noradrenaline from its stores, and hypertensive crises, severe headaches, palpitations and sweating result. The presence of other amines in food (for example, histamine in cheese or 5-HT in bananas and

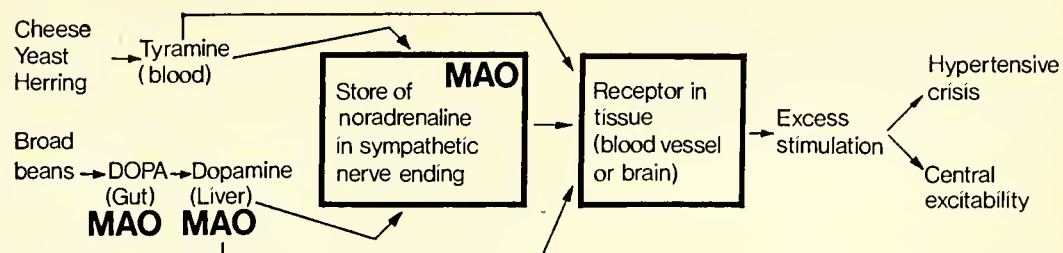

tomatoes) may increase the severity of the symptoms as they, like tyramine, remain protected from destruction when an inhibitor is present.

Dihydroxyphenylalanine (DOPA) occurs in significant amounts in broad beans and patients who ingest DOPA or broad beans while under treatment with certain MAO-inhibitors may also experience hypertension and central excitation.

DOPA, an amino acid, is normally absorbed and decarboxylated in the liver to form dopamine which is then deaminated by MAO. When the liver MAO is inhibited, dopamine, like tyramine, remains not metabolised and relatively high concentrations finally reach the area of the sympathetic nerve endings, where some is converted into intracellular noradrenaline and some stimulates the tissue receptors directly. The effect of dopamine is thus exaggerated when MAO is inhibited.

Although the number of foods which interact with MAO-inhibitors is limited, the number of drugs interacting with them is vast. This is probably because MAO-inhibitors, apart from their inhibitory action on MAO, inhibit other enzymes and particularly those in liver microsomes — the so-called drug-metabolising enzymes. An example of such inhibition is the potentiation of the action of the barbiturates by MAO-inhibitors. A unified theory to account for all these drug interactions has been suggested, with effects on enzymes (which are specific proteins) remaining the most likely explanation.

Treatment of the hypertensive crises in the present examples consists of administering an alpha-adrenergic blocking drug such as phentolamine which competes with noradrenaline and other amines for the tissue receptors and thereby reduces

the effects of smooth muscle stimulation. The central adrenergic symptom of hyperexcitability is usually treated with chlorpromazine.

Examples of other undesirable interactions between drugs and foods have been reported in the literature from time to time and the search continues for others. Alcohol has been implicated in many of those so far described. The sedative action of the antihistamines, for example, is markedly increased by alcohol, and the intensity and duration of the action of the barbiturates are enhanced.

In another context, the action of aspirin has been found to be modified by altering the ratio of carbohydrate to protein in the diet, a higher carbohydrate component greatly potentiating many of its effects. But who would have expected the intake of alcohol to increase the danger — as it does — of cleaning upholstery with carbon tetrachloride? In this example, the carbon tetrachloride is probably more effectively absorbed through the lungs, so that its hepatotoxic effect then becomes of major importance.

Alcohol is also constantly mentioned by patients as a dietary precipitant of attacks of migraine and it may well be that alcohol facilitates the absorption of amines from food, their increased blood level being the most likely cause of the headache. Furthermore, when patients with a history of migraine are given tyramine or foods containing tyramine, the migraine is precipitated more especially when alcohol is present, though there is evidence that tyramine is not the only amine in food which can produce migraine in susceptible individuals.

Perhaps it is not well-known that the world's population can be split into two clearly defined groups as a result of tasting thiourea. One group tastes thiourea as an intensively bitter chemical in solution and can detect very low concentrations, whereas the other group can only taste it in strong solution. More than a 16-fold difference in strength divides the two groups. With phenylthiourea (PTC), the difference is more than 128-fold.

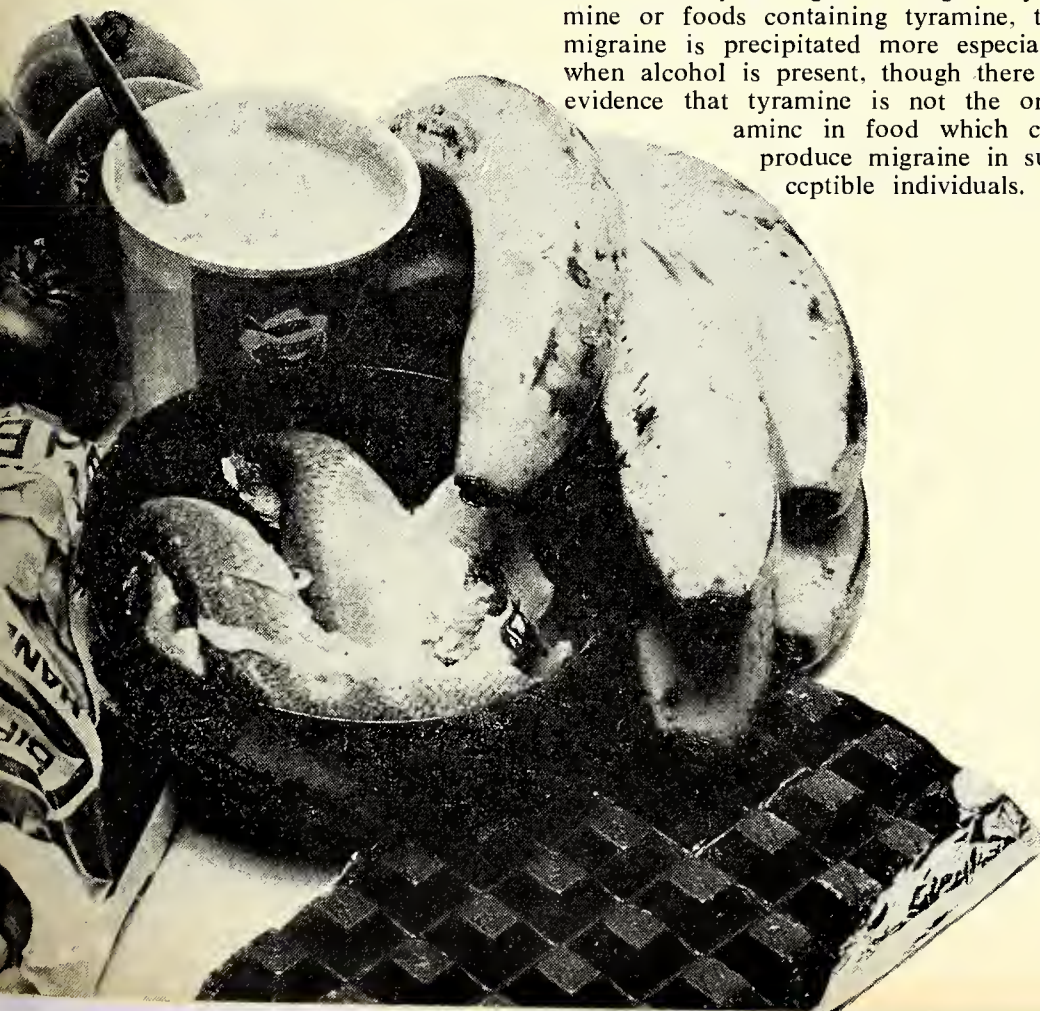

Generally three out of every four individuals can taste the weak solutions of PTC. The character responsible for the inability to taste the bitter substance in weak solution is recessive and not sex-linked. PTC is typical of a group of chemicals possessing antithyroid activity and it has in fact been tried clinically for combating goitre. Individuals lacking the ability to taste weak solutions of PTC may imbibe PTC and other thioureas with impunity and may well show symptoms of hypothyroidism.

Link with drug side effects

Thioureas have been identified in many members of the brassica family of vegetables. Evidence at the moment points to a link between the inability of the individual to taste PTC (except in strong solution) and his ability to show undesirable effects to drugs such as penicillin, but further extensive studies are required before such a tasting test becomes of major importance to medicine.

To explain the undesirable effects which sometimes occur after the ingestion of different foods by patients undergoing certain drug treatments, it is necessary to attempt to show both that a substance in the food is capable of producing the effect in animals with different dietary habits (for example the rat, the fowl and the cat) and that this substance is only absorbed in significant amounts from the intestine into the systemic blood stream after the specific drug treatment. It is also necessary to identify the substance, determine its site of action, and study the various factors which modify its pharmacological or toxicological effects.

There is a great need, therefore, to sponsor further research into the possible interactions between food and drugs. Such studies have been grossly neglected in the past, probably because the pharmaceutical manufacturer is concerned chiefly with his product and its effectiveness in different diseases, whereas the food manufacturer is aiming to improve his preparation and make it more safe, regardless of the drugs which the consumer may be receiving at the same time. More money should be allotted to research into the problem of the interaction of food and drugs.

COMPANY NEWS

Barclay and Sons to buy Wyleys Ltd

Barclay & Sons, Ltd, are to acquire Wyleys Ltd, the Coventry-based wholesalers and wholly-owned subsidiary of Bush Boake Allen Ltd. An agreement has been announced whereby Barclay will pay £205,000 on completion for the whole of the issued share capital of Wyleys and to re-pay an inter-company loan account of £130,000 over a period of one year.

Wyleys made profits before taxation, and before charging inter-company loan interest, of approximately £73,000 during 1969. The net tangible assets of Wyleys being acquired by Barclay amount to approximately £227,000.

The distribution network of Wyleys is, in certain respects, complementary to that of pharmaceutical companies already owned by Barclay in the Midlands. The directors of Barclay consider that significant benefits will accrue from the merging of the activities of these companies and have given an assurance to Bush Boake Allen that due regard will be paid to the interests of all Wyleys' employees.

Bush Boake Allen is a division of Albright & Wilson Ltd.

Peak sales for Lilly

Eli Lilly & Co, Indianapolis, USA, estimate that their world sales for 1969 reached a value of £223.9m compared with £199.8m in 1968. Net income for 1969 was estimated at £34.9m (£29.5m, 1968).

Reviewing the results for 1969, Mr Eugene N. Beesley (chairman) said in Indianapolis that the year's growth came from a wide range of products. Sales of medicines for human use represented 71 per cent of the total. Agricultural, animal health and industrial products added the remaining 29 per cent. The US market contributed about three-quarters.

Bydand's results

Bydand Ltd report that group results for the third quarter were slightly ahead of forecast. Trading profits for the nine months ended December 31, 1969 were £185,000 (against £190,000, which included £30,000 from the sale of land).

The directors expect that full year's profits will show a marked improvement over the £264,000 in the previous year.

Photax deficit in 1969

Photax (London) Ltd had a deficit of £29,207 for the year ended October 3, 1969 (compared with a profit of £128,696 in the previous year). No dividend is being paid (21 per cent previously). Sales

were £804,000 (£1,212,000), the directors saying that the 55-per cent rate of purchase tax is having a severe effect on trade.

Economies have been made including closing the Newcastle factory and the sale of freehold premises in London.

Monsanto's sales dip

Monsanto Co, St Louis, USA, estimate sales in 1969 of \$1,938 m — 4 per cent more than in 1968. Unaudited net income of \$109 m, however, indicates a 5 per cent decrease compared with 1968.

In 1969, there was also extraordinary income of \$6,741,000 attributable mainly to the sale of certain businesses and to tax-loss carry-forwards. Such income increased the 1969 unaudited net to \$116,125,000.

Extravagance denied at bankruptcy hearing

Mrs Barbara Isabella Wozniak, MPS, formerly trading as Barbara, dispensing chemist, at 26 North End Parade, West Kensington, London, told London bankruptcy court recently that pilfering from her shop was one of the main causes of her failure. She said it got so bad she was convinced somebody had a master key to the shop and used to go in and help themselves.

Mrs Wozniak disclosed debts of £6,744 and assets of £97 in her statement of affairs.

She agreed with the official receiver that she had difficulty in paying her debts on time right from the start, in 1955. She claimed that her position was later made worse by development changes in the area and by competition from supermarkets.

The official receiver said in his opinion the real reason for her bankruptcy was overdrawn the profits. He pointed out that her expenses had included a flat for which she had paid £575 a year, exclusive of rates, and her son had been educated at a school which had cost her up to £360 a year. The hearing was concluded.

Appointments

Max Factor Ltd: Neville Stranger, vice-president, International division, Max Factor & Co, and manager of its British branch, has been promoted to the newly-created position of director of United Kingdom operations. Both the branch in Bournemouth and Max Factor Ltd in London will now be under his supervision. He will also be joining the board of Max Factor Ltd.

Mr A. J. Klein continues as chairman of Max Factor Ltd., and Mr G. A. Slater continues as its managing director.

Parke, Davis & Co have appointed Mr D. R. Ross general manager of their London branch. Mr Ross succeeds Mr S. E. Andrews, MPS, who is taking up an appointment outside the pharmaceutical industry in his native New Zealand.

Mr Ross joined the London branch of Parke-Davis in April 1949 as manager, accounts and audits department. In No-

vember 1955 he was appointed assistant general manager, a position he filled until April 1967, when he was appointed deputy general manager.

Mr Ross is a member of the Institute of Chartered Accountants of Scotland and an associate member of the British Institute of Management. He is a past-president and a member of the Proprietary Articles Trade Association and a member of a financial advisory committee to the Association and a member of a financial advisory committee to the Association of the British Pharmaceutical Industry's Negotiating Committee.

Crookes Group: Mr R. E. Ablett, managing director, Crookes Veterinary Ltd has been appointed acting managing director of C.L. (Basingstoke) Ltd, a holding company in the Guinness group, taking over from Mr C. J. Clarke, who has been granted six months leave. Mr. Ablett will continue in his present capacity with Crookes Veterinary Ltd.

Wellcome Foundation Ltd have appointed Mr Brian Bonner-Davies, BA, their liaison officer for the Americas.

Optrex (Overseas) Ltd have appointed Mr A. E. Lloyd-Dodd their export general manager.

H. Mayer Senior Ltd have appointed Mr John L. Starnes as director. He will be assisted by Mr Nicholas J. Page.

Mr Ellis Seillon, the new chairman of Stanley Weston Group Ltd; Mr Seillon and his associates have bought 31 per cent of the equity of the group (see C&D, January 31, p 124)

How to buy and sell

F

C

A

B

Last year, for the first time, we put together three Polaroid sunglass merchandising packs.

Each one came complete with a display unit and a selection of our best-selling sunglasses or clip-ons. And they worked a treat.

So much so, that this year we're offering you six packages instead of three.

Package A. The top ten models from our 1970 range in a full-colour counter unit. The retail cost is £13.4.2 and our suggested selling price, £19.15.0. (Put away the pencil, you make £6.10.10.)

Package B. A neat mahogany frame bar that will hold ten sunglasses and two clip-ons. (Ideal if you're stuck for space.) The retail cost is £95.1.8, for 50 sunglasses and 10 clips, and at the suggested selling price you'll make £47.3.4.

Package C. Almost half the adults in Britain wear glasses, so ignore clip-ons at your peril. This full colour display holds all five models and for £27.5.5 will give you a profit of £13.9.7, it comes with 25 clips.

Package D. Our biggest one yet. Thirty-six sunglasses and four clip-ons in a beautiful frame bar. If you don't have room

WEEKLY PRICE CHANGES AND NEW PRODUCT ADDITIONS

Trade prices are given per dozen. Bold upright figures (2 9) in the retail column indicate the price is subject to retail price maintenance. Italic figures (2 9) is manufacturers recommended price. Light upright figures (2 9) is a suggested guide.

THIS WEEK'S CHANGES

Prices are given in the sequence Trade Price per Doz.: Purchase Tax per Doz.: Retail Price. Bold upright figures (2 9) in the retail price column indicate that the price is subject to resale price maintenance; italic figures (2 9) that it is recommended by the manufacturers; and light upright figures (2 9) that it is "notional" as a guide to the retailer in determining his own retail price.

Polaroid Sunglasses.

D

on the counter you can stick it on the wall. Retail cost, for 80 sunglasses and 20 clip-ons, £157.19.8. Selling price, £236.7.0. Profit, £78.7.4. Doesn't that sound nice?

Package E. (*not illustrated*) A similar frame bar to the one in package D, but with gilt finish. You can get it from your wholesaler with an 'open-stock' order of any 250 sunglasses you care to choose.

Package F. We've re-designed our rotating unit and added a mirror. It takes 20 sunglasses and £87.18.4 of your money. But you should make £43.11.8 on the deal. (You get 50 sunglasses and 10 clips).

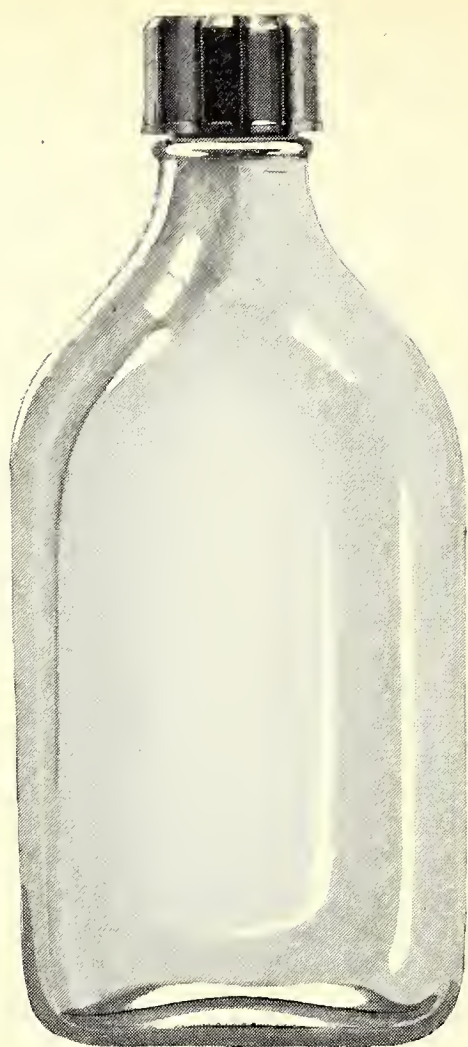

Your wholesaler can give you the model numbers in each package.

And, of course, if you want to order in the more conventional way, he'll be happy to help there, too.

But we're hoping that at least one of the packages will seem right for your business. Big or small.

If last year was anything to go by, they should help you sell a lot more Polaroid sunglasses. And isn't that what it's all about?

Polaroid Sunglasses.

Buy now—pay later

The recent spate of applications for licences to manufacture a number of drugs (p 148) highlights a well-known problem that exists in the pharmaceutical industry. As soon as a known drug had been marketed the patentee is often faced with the activities of the infringer, and although he may be able to apply for an interlocutory injunction restraining the infringement, sooner or later a competitor will apply to the Patent Office for the grant of a compulsory licence.

The Patents Act 1949 section 37 provides that at any time after the expiration of three years a person interested may apply for a compulsory licence. However, in order to obtain a licence he must show that the patent is not being properly exploited. The owner of a patent for a food or a medicine is not covered by section 37, and by the provisions of section 41 a compulsory licence can be granted at any time unless the Comptroller thinks there are good reasons to refuse the application.

It must be noted that the drug patentee is not allowed the three year exploitation period and, further, he must show good reasons for not granting a licence, whereas in section 37 cases the applicant must show that the patent is not being properly exploited.

At the moment the industry is awaiting the report of the Banks Committee on the revision of patent law and those who have research budgets hope that the committee will recommend a change in the law. It must be remembered that the government of the day is not obliged to accept any recommendation of a committee and other factors must be taken into account. It is obvious from any reading of the advice tendered by the Department of Health and Social Security that the medical practitioner is being constantly advised to prescribe drugs by the approved

name so that non-branded "equivalents" can be supplied at a reduced cost.

It is doubtful whether that policy of encouraging the supply of non-branded equivalents and therefore the encouraging of pharmaceutical firms to produce such "equivalents" can continue if the industry is allowed the advantages given to other patentees under the provisions of section 37 of the Patent Acts 1949. Even though the industry may well have a good case it seems that these political considerations may well take priority.

All the industry can hope for is that the onus will be placed on the applicant as in section 37 proceedings and not as in the manner laid down in section 41.

Research may become uneconomic

The Department may find itself on the horns of a dilemma. However indirectly they encourage the activities of the price cutter they may find that the pharmaceutical industry will consider it uneconomic to spend vast sums of money on research projects which, although they may enrich the scientific knowledge of the community, may give them very little profit in return. Thus, a policy of buying cheaply today could eventually lead to the community paying dearly later.

On the other hand, the Department is under constant pressure to reduce the cost of "the drug bill", and as they are unable to take any action which might infringe the prescriber's sacred right to decide what drug his patient will have, they have to consider more indirect methods as pharmacists in general practice know to their cost (or on-cost).

It is a delicate situation but the solution must take into account the contribution made by the research activities of the pharmaceutical industry otherwise the outlook will be bleak.

BUSINESS Q & A

What are the benefits of buying a business on leasehold premises?

This question is rather of the "how long is a piece of string" variety. Any benefit must depend on the terms of the lease and the cost of acquisition. In general it may be said that a business using leasehold premises does not require the businessman to tie up as much capital in premises as would be needed in the acquisition of a freehold. If the lease has a low rent and a considerable number of years to run it may of course, have a considerable capital value. Nevertheless the capital outlay will normally be considerably less in the case of leasehold property.

As a pharmacist manager, I have several assistants who have, up to now, received their weekly wages each Friday for work done from the previous Monday, and it seems that it is now intended to pay them at

fortnightly intervals in arrears. Will you advise me whether an employer is legally entitled to pay wages in this manner, particularly having regard to the fact that in this case payment has previously been made at weekly intervals?

The intervals at which employees are paid is a matter of agreement between the parties concerned. You are not able to change any contractual arrangement unilaterally, but if what you are proposing to do is with the agreement of the employees concerned there is no question of its being illegal.

We find that we are now supposed to submit our accounts with our annual return. Our financial year ends in September, and the year before last our accounts were completed by Christmas. Last year's accounts were not completed until this January so we put an annual return in as for December 31 1968. Now we are asked for the accounts but of

course there are none. What should we do?

If you write and inform the Registrar of Companies of the position he will not press the requirements for the submission of accounts with last year's return, but you will need to submit the accounts when this year's annual return is filed.

I am manager of a branch of a small company owning two or three pharmacies. I now own a proportion of the shares (just on 25 per cent) but I am not a director and never have been. Nevertheless the Inspector of Taxes insists on treating me as a director for the purposes of the company's tax. Is that right?

The Inspector of Taxes is quite correct. Under the 18th Schedule to the Finance Act 1965 it is provided that a director includes any person concerned in the management of the trade or business, who is remunerated out of the company's funds and who controls more than 20 per cent of the ordinary share capital.

PROFESSIONAL NEWS

Pharmaceutical Society
of Northern Ireland

Prescription 'snoop': representative replies

A manufacturer's representative whose behaviour had been complained of to the Council of the Pharmaceutical Society of Northern Ireland (*C & D*, January 10, p 26) has now given his version of what happened.

The representative had called at a pharmacy to see a veterinary surgeon's prescription when the pharmacist ordered a supply of Streptapen from a wholesaler.

In a letter read at the monthly meeting of Council in Belfast on January 15 the representative said that there was no difficulty in obtaining supplies of his company's veterinary products to meet prescriptions once the company was satisfied the prescription had been issued. Either the prescription could be shown to the wholesaler or the veterinary surgeon concerned could ask that the pharmacist be supplied with sufficient stock to meet the needs of the immediate future.

The letter pointed out that the wholesalers had not been assured by the chief pharmaceutical inspector that the pharmacist held a prescription but that the pharmacist was meticulous in the way he kept his prescriptions. The veterinary surgeon had been telephoned so that if he wished a stock of the preparation could be established at the pharmacy.

MR N. A. J. ANDERSON said that with Christmas coming immediately after the last Council meeting it had not been possible to arrange a meeting of the Ethical Committee to consider the matter but that would now shortly be done.

The secretary, MR W. GORMAN, reported that the application of a member of the Society for an Order of Prohibition to prevent the Statutory Committee continuing with an inquiry would be heard in the High Court on January 16 (*C & D*, November 1, 1969, p 402).

The hearing was later postponed and was due to take place on February 6.

Presenting the income and expenditure account and balance sheet of the Northern Ireland Chemists' Benevolent Fund for the year ended December 31, 1969, MR G. E. MCILHAGGER, treasurer, said that income at £1,426 16s 5d exceeded expenditure by £757 1s 5d. Several investments had been sold during the year incurring a loss of £19 3s and the sum of £737 18s 5d, added to existing capital and liabilities, made a total of £10,607 4s 3d.

THE PRESIDENT drew attention to a donation of £20 from the Fermanagh and West Tyrone Branch of the Ulster Chemists' Association. The fund he said was in a healthy state but the amount received by way of interest did not cover grants.

Presenting the report of the Education Committee MR A. N. MORRISON said that it was hoped to arrange an "at home" early in March when members of the Council could meet pharmacy students from Belfast College of Technology. Dr

Newcombe had written to say that there was a lack of interest in the Society of Pharmaceutical Students and the "at home" might not receive the support it deserved.

The Committee recommended that a circular should be sent to members in an effort to make out a list of premises in which students could undertake practical training. A one week full-time refresher course for pharmacists would probably be held in the pharmacy department at the College in September, provisionally 14-18.

Arrangements for the visit to Belfast on February 23 and 24 of representatives of the Pharmaceutical Society of Great Britain were submitted. The report was adopted. The Law Committee's report presented by Mr J. C. Wellwood was also adopted.

The report of the Finance Committee presented by Mr W. T. Hunter included a recommendation that accounts amounting to £2,656 18s 7d be paid. MR HUNTER said the Society had incurred a great deal of expense in connection with the meeting of the British Pharmaceutical Conference in Belfast in September, 1969.

The following examiners were nominated to conduct the Society's examinations during 1970: Pharmaceutics, External, Mr N. H. Booth, Internal, Mr W. Woodside; Pharmaceutical chemistry, Dr F. Perks; Pharmacology, External, Professor C. W. M. Wilson, Internal, Mr J. G. Swanton.

The SECRETARY pointed out that some of the examiners nominated had held office for five years, the maximum statutory period allowed under the Pharmacy and Poisons Act (Northern Ireland) 925. It would therefore be necessary to obtain the consent of the Minister of Home Affairs to the list of present nominees.

A letter from the Ulster Chemist's Association was read nominating Mr J. K. McGregor and Mr T. I. O'Rourke to serve on the Pharmacy Practice Committee and Mr G. M. Armstrong on the Entertainment Committee.

A report on a joint meeting of the Council, Ulster Chemists' Association, Local Pharmaceutical Committee, Northern Ireland Branch of the Guild of Public Pharmacists and Association of Pharmacist representatives held on January 8 was received. A previous meeting had resolved that some form of restriction of contract and a rationalisation of the pharmaceutical service were necessary. The meeting was held to consider how

those objects could best be achieved.

THE PRESIDENT said the meeting had been used to find the views of the various bodies on the Pemberton report and the extent of agreement.

Representatives of the Council, the UCA and Local Pharmaceutical Committee would shortly meet officials of the Ministry of Health and Social Services to discuss the report.

The application of Miss Dorothy Hall, 2 Parkmount, Bangor, co Down, for the restoration of her name to the register was granted.

East Belfast chemists reject health centres

A motion to the effect that "we wish to remain private retail chemists and have no desire at present to enter health centres" was passed unanimously at the January meeting of East Belfast Branch of the Ulster Chemists' Association. The motion was proposed by Mr W. Moffett, following a talk by Mr T. I. O'Rourke, a member of the Ulster Chemists' Association's practice committee and the Northern Ireland Local Pharmaceutical Committee, in which he said that health centres were being "sold" to pharmacists not for their benefit but to produce a cheaper health service.

Mr O'Rourke said that the Ministry envisaged 100 health centres in Northern Ireland containing 60 per cent of all general practitioners. Pharmacies in the centres would comprise mainly consortia of local pharmacists and after rents and other expenses had been paid there would be little left for individual members.

Pharmacists, said Mr O'Rourke, would do better through limitation on the number of contracts and remaining as private chemists, selling traditional goods rather than entering health centres where the lines that could be sold would be restricted.

During the discussion the view was expressed that communication was lacking from the various committees to the lay members of the profession. Mr J. Knox mooted that indeed some information was being withheld and any pharmacists going into a health centre was doing so only because of fear.

Mr R. Wightman felt that a compulsory staff of two pharmacists per pharmacy would provide a better service from fewer existing pharmacies.

Mr W. Moffett's resolution expressing concern about current negotiations and the desire to remain private retail chemists was passed unanimously with the addition of two riders. (a) That a new NHS contract with chemists be drawn up and (b) That no negotiations whatever in relation to health centres take place with the Ministry until there is limitation of contracts.

Pharmacists will code scripts in new Irish health scheme

Pricing by computer is to be introduced for prescriptions dispensed under the new Irish health service scheme planned to come into operation in 1971. Community pharmacists will be required to code their prescriptions ready for processing by the computer.

That was one of the points about the new service mentioned by Dr J. A. ROBINS, officer in charge, development unit, Department of Health, when he addressed an open forum in the Pharmacy Club, Dublin, on January 22.

Doctors would be supplied with standard prescription forms which the patient would be able to take to the chemist of his choice. As in Northern Ireland, the chemist would have an index, or code, covering the full range of prescriptions.

[An outline of the Northern Ireland system appeared in the *C & D*, August 16, 1969. Ed.]

After issuing the prescription, the pharmacist would put the code, with his name, on the form, and at the end of each month all forms would be forwarded to a central pricing bureau.

It was intended that the pharmacist would be paid within about two weeks of submitting his monthly returns. Dr Robins could not say what the payment would be as negotiations were in progress.

Four thousand items coded

Replying to questions, Dr Robins told Mr M. G. McAuliffe that the code would cover all prescriptions: everything at present on the dispensing schedule—about 4,000 items. The code would indicate the number of units of an item issued and the size of the pack from which they came. Payment would depend on the size of the pack.

When MR MCAULIFFE asked what incentive there would be for chemists to stock the large packs Dr Robins replied that there would be no great incentive unless he was sure of getting rid of them. It would not be in his interests for them to lie on his shelf or go out of date. If the smaller pack was needed the chemist would be paid at the appropriate rate but, if the central pricing bureau considered he was deliberately buying smaller packs to get higher rates, they could check on this through the computer.

The chemist would not put any price on the prescription when forwarding it to the Department.

MR MCAULIFFE: "And how will we know what we are owed?"

DR ROBINS: "This touches on the negotiations. However, I think I am in order in saying you will be paid what it cost you from the wholesaler—plus a certain fee."

MR J. BURKE pointed out that many members of the negotiating committee were under considerable pressure at the moment being also engaged on "vetting" the recommendations of *Comhairle na Nimheanna* (Poisons' Board). If members would bear with the Committee for a little longer they would be given every

opportunity of discussing a positive offer once it was formulated.

Answering MRS G. O'CONNOR, DR ROBINS said the scheme should not involve a lot of record-keeping. The only document with which the Department would be concerned would be the prescription. Inspections would be infrequent but would, of course, have to take place to ensure there was no abuse.

If a pharmacist, in good faith, dispensed an item which had been inserted in error by the doctor on the prescription, and which the pharmacist knew the patient should not be getting, he did not think the pharmacist would be held responsible since it would be the doctor who had made the error.

Asked by MR M. SHANNON if there would be a limit to the quantities that could be ordered on one prescription, Dr Robins said that the computer would be programmed to draw attention to exceptionally high amounts. If that should happen, he would imagine it would be taken up by the central administration.

MR COLM CASSIDY asked if pharmacists would now get their stocks at prices charged by the Combined Purchasing Authority to local authorities or at the existing rates charged by wholesalers. Dr Robins said they would continue to buy at the same rates from the suppliers. The contract arrangement for drugs used in the public service would end. Manufacturers had been concerned about knowing if they would be on the contracting list from year to year as they needed to plan ahead. The Minister had agreed to alter the system on condition that favourable terms were given by the manufacturers and agreement had been reached.

MR R. PURCELL who asked if each pharmacist would be required to enter into a contract with the local authority was told they would, but there would be no great formality. It was unlikely elaborate conditions would be imposed.

'Reasonably final offer'

Asked the position about the negotiations on the terms for the pharmacists, DR ROBINS said the Minister had now made "a reasonably final offer." An offer had also been made to the doctors and they would hope to conclude both agreements at about the same time.

One change that would significantly affect pharmacists under the new scheme was the abolition in April 1971 of the dispensary service. This would result in a considerable reduction of work for pharmacists employed by health authorities in connection with the general medical service and some pharmacists would become redundant. So far as possible — they, and particularly permanent phar-

macists, would be retained in connection with hospital services.

Since, for temporary pharmacists, there was no guarantee of continued employment, there would be no question of compensation, but part-time permanent officers would be entitled to compensation based on the number of years they had been in permanent employment. The possibility of a payment under the present redundancy scheme, was being considered but such payments were generally made only to persons insurable under the Social Welfare Acts, and that did not include part-time pharmacists. However, it was possible that they might be deemed by that Department to be in insurable employment even though they were not making contributions.

No State Dispensing

Asked if any new State institutions might be expected to come into operation for dispensing, Dr Robins replied: "No." The Minister for Health had accepted the desirability of retail private pharmacists doing the work. However, the Minister also considered that since this extra practice had not been done previously by the chemist, the State was entitled to get more favourable terms than were given to private patients.

Answering MR J. TRAVERS he said there were some drugs and medicines which consultants wanted to give on the spot to hospital out-patients. That, however, would amount to very little dispensing. The fact that no provision had been made for pharmacy in the new St Vincent's hospital in Dublin showed the way things were going.

Other points made by Dr Robins in his address were as follows:

The major change brought about by the Health Bill, which sets up the service, is to remove the administration of the health services from the local authorities. Eight separate health boards based on county groupings would be responsible for the health services in the future.

Basic difference between the new health board areas and the existing authorities — apart from area differences was that in addition to representatives elected from the various local authorities there would be members of the main professions involved in the service. The Boards would probably be set up next October.

Existing dispensary doctors' posts would be abolished but in some remote areas doctors would continue to be salaried as an inducement to stay.

Doctors would be paid on a fee-for-service basis. An offer had been made to them, but so far they had not responded.

Two other schemes touching on the provision of drugs were proposed. One, similar to the diabetic scheme was for persons with certain scheduled long-term conditions who would be entitled to drugs free of charge. It would also come into operation on April 1, 1971.

A further scheme would help people in the middle income group, faced with big medicine bills for other than long-term conditions. This would not involve the chemist in any way, apart from giving the person concerned a receipt.

OPEN SHOP

by E. C. Tenner

The winter of our discontent

The influenza epidemic has left our area, and this week, for the first time since early December, we have time to take stock, at least metaphorically. It is hard to remember a period of so much work among so much confusion; prescriptions and no bottles, expectorants and no liquorice, customers and no staff.

As if this wasn't enough, we have the issue of the report of the Committee on the Safety of Drugs concerning oral contraceptives. This was surely a masterpiece of mistiming, throwing great strain on doctors and pharmacists at a time when they had more than enough to cope with.

No one would argue that the Committee's decision was not the right one, but a right decision is even more effective if made known at the right time and in the right way. The matter was not of immediate concern, and allowed time for the correct dissemination of the information, firstly to doctors and pharmacists.

Pharmacist representation needed

The way it was done highlights the need for capable practising pharmacist representation on high-powered committees of this kind, to ensure that practical considerations are not lost sight of. It behoves the Council of our Society continually to press the authorities for representation on all committees set up to deliberate on medicines. If we could achieve this, then the confusion created by the way this decision was announced will have been worthwhile, even if it did add more pressure to an already struggling pharmaceutical service.

It is a matter of considerable satisfaction to all of us that there have been, at least in this area, no official complaints regarding our service during this period. It is, however, a matter of regret that at no time in the press were we publicly congratulated. Praise was lavished on doctors and nurses, and I would not begrudge them it. Perhaps fourteen hours a day is not long enough for recognition, but it was long enough to make one feel that pharmacy was playing its part.

We could even have done without official thanks for our services if the interim settlement just announced had been more than a derisory 1.25d.

In order, I think, to make these announcements more palatable to the members, the total cost is always stated, in this case £1.4 million in the next 12 months. This year, anyway, it has the opposite effect. We are told daily of negotiated wage increases costing our industry an annual twenty or thirty millions, so that even our £1.4 million looks a little silly by comparison. The real trouble, of course, is that no contractor I have yet met really understands the extremely com-

plicated financial equation involved in a settlement.

This would seem to be a priority for the Chemist Contractors Committee: to produce a new method of presenting figures involved in settlements, so that the individual contractors can see if they are getting a fair return for their labour—which has been given unstintingly during these last few weeks.

It may well be that the Contractors Committee deserve praise for their negotiations on our behalf. A simplified method of producing and presenting their achievements would ensure that they get it, and remove the sense of isolation between those of us who maintain the service in our dispensaries throughout the country, and those who negotiate on our behalf.

Pharmacists as a class have many frustrations to face, but for those of our colleagues who still live at their pharmacies the worst must surely be the prescription presented at 2.00 am, obviously urgent, but not so marked by the prescriber. In a small town this can, even if at some inconvenience, be rectified by sending it back at some later time to the doctor.

Let us, however, consider the position that can now apply in some of our larger cities. In many instances the doctor dealing with a night call may not be the patient's usual doctor. Much more likely he will be an Emergency Medical Service doctor. If so, he will be virtually impossible to trace if he omits to observe his terms of service. In such circumstances there is little that the pharmacist can do other than dispense the prescription and hope that, even if he will never receive his extra fee, he has at least generated a little goodwill for pharmacists in general.

For the few pharmacists affected I have a great deal of sympathy, and I trust that it will not be long before the pricing bureaux are empowered to accept the pharmacist's own endorsement.

We are regularly given statistics that prove what we all know to be true regarding the fact that pharmacists are an ageing race. I recently came up against a new aspect of this when I found that two towns in this area had lost their oxygen service. The cases were identical. In each place the service had been carried on for many years by a single pharmacist who, owing to age and illness, was no longer able physically to handle the heavy cylinders. Though, after a great deal of effort, it has been possible to restore the service, all the other pharmacists approached had sound reasons why they did not wish to handle oxygen.

The Health Ministry and the Central NHS Committee should devote some effort to ascertaining just what more needs to be done to make the oxygen service attractive to the younger contractors.

Proposed names for pesticides

The British Standards Institution seeks comments on the following proposed names for pesticides. Comments should be addressed to Mr D. G. Berry, British Standards Institution, Park Street, London W1, to arrive before March 26.

Bioresmethrin or biofurylmethrin 5 - benzyl - 3 - furylmethyl (+) - *trans* - chrysanthemate¹

Delachlor *N* - butoxymethyl - 2 - chloro - 2', 6' - diethylacetanilide

Isonoruron A mixture of the two isomers *N'* - (hexahydro-4, 7 - methanoindan - 1 - yl) - *NN* - dimethylurea and *N'* - (hexahydro - 4, 7 - methanoindan - 2 - yl) - *NN* - dimethylurea

Propargite prop - 2 - ynyl 2 - (4 - *t* - butylphenoxy) cyclohexyl sulphite²

Pyresmethrin or pyfurylmethrin 5 - benzyl - 3 - furylmethyl (+) - *trans* - pyrethrate³

Resmethrin or furylmethrin 5 - benzyl - 3 - furylmethyl (±) - *cis*, *trans* - chrysanthemate⁴

Sebuthylazine 2 - chloro - 4 - ethylamino - 6 - *s* - butylamino - 1, 3, 5 - triazine

Terbuthylazine 2 - chloro - 4 - ethylamino - 6 - *t* - butylamino - 1, 3, 5 - triazine

Thiophanate 1, 2 - di - (3 - ethoxycarbonyl - 2 - thioureido) benzene

Thiophanate-methyl 1, 2 - di - (3 - methoxycarbonyl - 2 - thioureido) benzene

¹ The name Bioestrin was previously proposed for this compound)

² The name Propargil was previously proposed for this compound)

³ The name Pyrestrin was previously proposed for this compound)

⁴ The name Restrin was previously proposed for this compound)

New from Suttons

**Unique concentrated plant
foods in easy-to-use sachets**

Modern science, and Suttons 150 years experience of growing the best seeds, have gone into producing ten special formulae containing chelated trace elements, balanced to promote vigorous plant growth. These new plant foods are highly concentrated—each ½ oz. sachet makes 2 galls. of feed. They are instantly soluble in water and suitable for foliar feeding. Suttons Plant Foods will be advertised extensively in the Gardening and National press starting in April.

Packets: each contain 3 sachets — 1/- Retail
Cartons: each contain 12 sachets — 3/- Retail

10 specialist formulae — 100% soluble

- | | |
|---------------------------------------|--|
| No 1 for Annual and Perennial Flowers | No 6 for Leaf Vegetables, Cucumber and Marrows |
| No 2 for Roses | No 7 for Peas, Beans, Sweet Peas |
| No 3 for Chrysanthemums and Dahlias | No 8 for Tomatoes |
| No 4 for House Plants | No 9 for all Lawn Grasses |
| No 5 for Root Vegetables | No 10 for general purpose, Shrubs and Bushes |

SPECIAL INTRODUCTORY PARCEL

Extra 10% discount — on special introductory parcel containing two 5-dozen display outers of three-sachet packets, three cartons of each formula with attractive display material.

Special introductory trade price £6.6.0.

Retail value, £10.10.0.

LETTERS

Activities of "splinter groups" in pharmacy were condemned by Mr J. Wright, secretary, Central NHS (Chemist Contractors) Committee, when he addressed a meeting in Leeds recently (see p 154). His attack has evoked an immediate reaction from some of those whose action he called in question.

What is a splinter?

Mr J. Wright, speaking at Leeds, having made no effort whatever to discuss with us the North-east London tripartite proposals, makes a gratuitous and intemperate attack. He describes well over a thousand of his members (so far) as a "splinter group". He accuses North-east London of basing their plan on the CAG—which he ought to know is utterly untrue, and he tries, by inference, to blame them for five extreme demands made years ago by the CAG with whom we have no affiliation whatever.

Clearly the Central Committee, with Mr Wright as secretary, will not hear of any contract other than that in which they themselves are so deeply and shortsightedly entrenched.

That leaves, however, the Pharmaceutical Society—and what better instrument through which to reunite and strengthen the profession. In 1964 Mr Wright held a referendum on whether or not to include the Society in our negotiating machinery. Despite the loaded nature of the question put, no less than 23 per cent of his replies were against him, and for Society participation—another splinter?

We attacked no-one, accused no group of splinter activity and sought only to unite the profession—and this we are succeeding in doing. At the Southend Branch of the Pharmaceutical Society a meeting of approximately 25 per cent of their membership voted 100 per cent for our proposals—more splinters?

One thousand two hundred pharmacists have already supported our proposals for the new contract, while only three opposed it—some splinter!

Two local Pharmaceutical Committees so far have considered the proposals and both have voted unanimous support—more splinters!

It would behove our Central Committee to consider the fate of Canute and to abandon the bigoted outlook that only they and their outdated contract can be right for pharmacy; to dissociate themselves from Mr Wright's casual attitude that "certainly many small pharmacies are closing, but this is simply an inevitable prelude to the heyday of the larger unit."

One can only assume that between these large units, where the small service pharmacies have folded up, the doctors will look after the dispensing (or maybe health centre pharmacies?), while Mr Wright and his merry men pursue their line of small

profits and quick returns on paper hankies in their big branches. Or does SPQR imply Small Pharmacies Quickly Removed?

Pharmacy would appear to have a choice. Down the drain with Joe Wright, whence 1,500 contractors have already gone in the last six years, or a move back to the Pharmaceutical Society and unity, and a contract geared to present day trends.

It is my fervent hope that in his outburst at Leeds Mr Wright has at last shown himself in his true colours as utterly opposed to remedial action, that our members will now realise that their salvation lies through their own Society as a united profession, and that we may have an end to sectional interests in pharmacy for all time.

R. G. Worby
Secretary,

NE London Pharmaceutical Committee

Critic criticised

I was extremely surprised to learn that Mr Joe Wright, secretary of the NPU, speaking to the Leeds Branch last week, attacked the Chemists' Action Group, the North-east London proposals for a new National Health Service Contract, Mr Idris Hughes and his Hertfordshire referendum, and Mr E. D. Hurt's proposal for the formation of a British Pharmaceutical Association.

He also criticised the membership of the Society for the manner in which they vote at Council elections. Clearly Mr Wright is a very worried man. But why?

In attacking the earlier CAG proposals for a new contract Mr Wright says, "No reasoned arguments" had been put forward in support of the demands. If "reasoned arguments" have resulted in the subminimal returns which "negotiations" have produced over the years, then the CAG would be very reticent about producing such arguments.

One does not have to be a prophet to predict where pharmacy is going. We firmly believe that the ever increasing number of pharmacy closures (nearly 500 net closures in 1969) is the danger signal that the fabric of pharmacy is rapidly crumbling.

It is imperative that we concentrate on a new contract that ensures for every pharmacist in general practice the right to earn his livelihood by professional practice alone, should he so desire. Unless such a contract is immediately negotiated the time is not far distant when our profession must fall between two stools, with the Department of Health on one side, and the supermarket chains on the other.

Mr Wright attacked proposals for a proper return on investment. He says that such a consideration applied to pharmacy would result in "a severe cut in remuneration." Mr Wright must think that 5d net profit on 12s average cost per prescription brings us into the supertax bracket.

It was interesting to note Mr Wright's reference to "strike action" as being the CAG's potential weapon for achieving the desired effect. It appears that if this is part of our future plans, then we are not

alone. The Liverpool hospital pharmacists have already taken a leaf out of our book in their decision last week to resign their posts if their claim for a salary increase is not fully met.

There is no dishonour in such strike action. The police surgeons used it not so long ago to further their claim for increased remuneration with successful results. "Reasoned arguments" with officials of government departments seem to hold little water, the only language which they seem to understand is that of withdrawal of service from the NHS. It is this threat of resignation which has been the key to success behind the BMA in its negotiations with government departments.

The Liverpool hospital pharmacists have taken the lead in taking this positive step, and the Chemists' Action Group wishes them every success.

In conclusion, I would like Mr Wright to take notice that if the number of retail outlets continues to decrease then we will not need to worry about contracts or negotiators, as pharmacy will merely become just one more department in the Ministry of Social Services, and pharmacists their salaried employees. Could this be the Government's "Plan for Pharmacy in the '80s?"

Perhaps Mr Wright and his "grapevine" can give us the answer.

Stanley Blum
Founder President
Chemists' Action Group

Doctors' dispensing

It was with intense disappointment that I read the decision of the dispensing committee of South-west London and Surrey Executive Council that the doctors in their specified areas are to continue the supply of drugs and appliances (C&D last week, page 119).

The voting of five to two against the case for pharmacy coupled with the opinion that "a review would not provide an added inducement to a chemist in a rural area" indicates the size of our problem and serves to remind us of the arena wherein the fate of rural pharmacy is really settled.

In this particular case I am assuming that the local Pharmaceutical Committee did a feasibility study and sought advice from the Central NHS (Chemist Contractors) Committee and from the Practice Committee of Council.

That being so, it is imperative in my opinion that these two bodies must hold a post-mortem on this case to see if even better guidance can be given so that, subject to Executive Council's standing orders, this case can be re-opened.

The decision must also serve as a warning to every rural area Pharmaceutical Committee, and I would hope that the plea made by Mr J. P. Kerr and myself a few years ago for a conference of rural area representatives will be proceeded with soon. We felt it was an important means whereby our rural area representatives could become more aware of how to construct and present an unanswerable case for pharmacy.

John B. Grosset

TRADE NEWS

A L'onglex redesign

Chesebrough-Pond's Ltd have redesigned the label for the popular L'onglex polish remover. The elegant silver print on a dark green background matches the design of the polishes, giving a total look to the L'onglex range. The retail price for L'onglex polish remover remains unchanged.

Twin pack

E. R. Squibb & Sons Ltd are introducing Fungilin TP (32s). This twin pack consists of 28 oral tablets and 15 vaginal tablets to be used concomitantly in the treatment of vaginal candidosis. (E. R. Squibb & Sons Ltd, Regal House, Twickenham, Middlesex.)

Femfresh economy packs

Femfresh are to market two new economy packs. The first is a 20-sachet pack (5s 11d). The second is an extra-large dry spray — 120 g — (8s 11d) to replace the 110 g. It will be sold in two fragrances, Fleur, Femfresh's original floral perfume, and Fougere, the new, fresh fragrance that was successfully launched last October.

More Junior varieties

Following upon the success of their Strained creamed rice and Strained semolina puddings, H. J. Heinz Co Ltd, Hayes Park, Hayes, Middlesex, are launching Junior creamed rice milk pudding (9d) and Junior creamed tapioca milk pudding (9d). The varieties are in 4½ oz cans and are packed 24 to the case.

Paton's new size

F. C. Paton (Southport) Ltd, PO Box 5, 1a Peets Lane, Southport, have introduced a new size Paton's Nail Hardener (5s 6d) which is said to be "proving most popular."

Fifteen day supply

H. & T. Kirby & Co Ltd, Mildenhall, nr Bury St Edmunds, Suffolk, point out that the pack of Day-Vits contains 15 tablets, sufficient for 15 days supply. (Corrected note.)

Bonus offers

H. & T. Kirby Ltd, Mildenhall, nr Bury St. Edmunds, Suffolk. Orange and halibut vitamins, 48 invoiced as 36. Day-Vits, 48 invoiced as 36.

Pan Britannica Industries Ltd, Waltham Cross, Herts. Baby Bio seed and cutting compost, Baby Bio potting compost. 10 per cent early delivery bonus. (Until February 28.)

Smith Kendon Ltd, 132 Borough High Street, London SE1. Glucose sweets. Orders for 8 to 23 doz; 13 invoiced as 12. Orders for 24 to 59 doz, 14 invoiced as 12. Orders of 60 doz or more, 15 invoiced as 12. All bonus tins in mixed-fruit variety. Extra bonus tin with each doz over the minimum in each bonus step on orders for black heart cherry or strawberry.

H. J. Heinz Co Ltd, Hayes Park, Hayes, Middlesex. Junior creamed rice milk pudding, Junior creamed tapioca pudding. 6d reduction per case (until February 21).

Earex Ltd, Tulketh Street, Southport, Lancs. Earex drops, 13 invoiced as 12 (until February 27). Obtainable through wholesalers only.

PROMOTIONS

Retailer bonus and display competition on Swarfega

To mark the introduction of shrink-wrap packaging on three retail packs of Swarfega hand cleanser, Deb are offering retailers a trade bonus and inviting them to enter a display competition with a top prize of £550.

Swarfega will be shrink-wrapped in packs of 2 dozen 2s size, 1 dozen 3s 6d and six 5s tins. Each pack will contain a display card, an explanatory letter outlining the scheme and bonus stamps. To obtain the bonus the retailer returns the stamps to Deb, affixed to his own letter-heading, in the reply paid envelope provided. The retailer will then receive a postal order to the value of the stamps returned. The offer will remain open until July 31.

All retailers returning stamps will be invited to participate in the display competition which will run for the three months April to June. To qualify for a prize the retailer will be required to maintain a display for one calendar month, for which additional display material will be provided.

The country will be divided into five areas and a monthly prize of £50 awarded for the best display in each area. At the end of June area winners will be judged and one selected for the £500 prize. (Deb Chemical Proprietaries Ltd, Belper, Derbyshire.)

Valentine's day promotion

A first-ever Ice Blue Aqua Velva after shave Valentine's day promotion, designed

to "unfreeze" February sales, is to go out in the February 14 issue of *Petticoat* magazine (on sale February 7). The theme is "Melt his heart on Valentine's day with a gift of Ice Blue Aqua Velva after shave."

As a special inducement to its readers, the magazine is offering a purchasing incentive of a 1s 6d heart-shaped money-off voucher redeemable against a purchase. (James B. Williams Co (England) Ltd. Distributors: Chemist Brokers, 27a South Street, Dorking.)

Pocket pack free with Meggezones

For a limited period, White Laboratories are offering a handy plastic pocket pack free with every purchase of Meggezones or MiniMeggezones. The packs, made of injection-moulded, high-impact polystyrene, are available in two sizes for each product and make ideal containers for the pastilles for either pocket or handbag use.

They are available to retailers as part of a special parcel (PPI) comprising a quantity of plastic packs, special self-feed dispenser cartons, each containing one dozen Meggezones and one dozen Mini-Meggezones, and a counter display unit.

As a trade bonus, with every order for 4 dozen Meggezones and 2 dozen Mini-Meggezones the retailer receives 13 to the dozen. (White Laboratories Ltd, Penarth Street, London SE15.)

NEW PRODUCTS AND PACKS

Cosmetics and toiletries

Rubinstein's Silk Fashion

Moisturising agents and silk are blended in the new Helena Rubinstein Silk Fashion make-up collection. The range consists of liquid make-up (16s), face powder (16s), coverfluid (17s 6d), minute make-up compact (17s 6d) and minute make-up refill (7s 3d).

A number of special new shades have been added to the Helena Rubinstein range including: Misty Dawn, a subtle delicate pink to give a blushing glow; Cameo Beige, a high fashion cool subtle beige; Toasted Caramel, a golden shade "to enhance the darker complexion." There are also translucent light medium and medium dark shades.

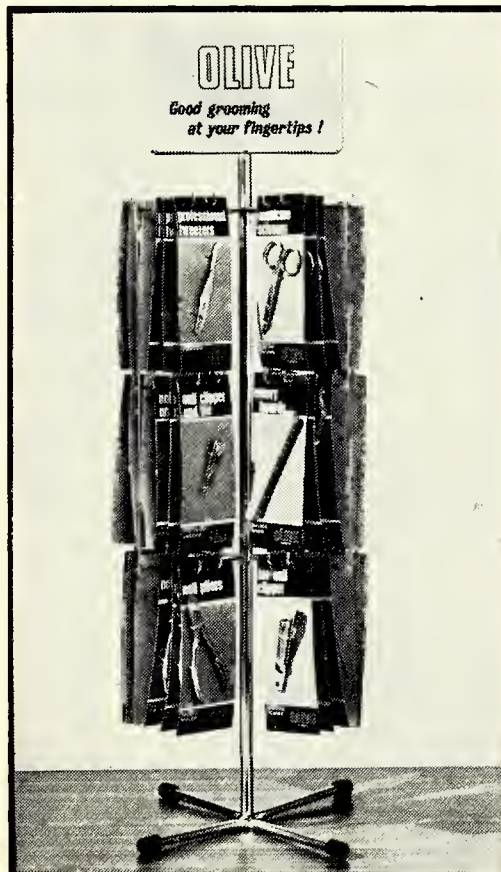

Another introduction by Rubinstein is Skin Life throat firming treatment (72s 6d) that combines the action of an emollient cream and an astringent lotion. Pack is a container of 40 cc.

French Almond dusting powder

Dusting powder is being added to the French Almond range (19s 6d). Perfumed with the French Almond fragrance it is presented with an attractive yellow and white puff in an elegant black drum decorated with the familiar French Almond white sprig motif and comes in a black and white high gloss carton. French Almond dusting powder is issued in minimum packs of three. (The House of Roberts Windsor, 14 Pall Mall, London SW 1.)

Acti-Vita skin care

Germaine Monteil have added Acti-Vita, a new skin-care cream to their treatment range of products. It is described as a "light, fragrant, pale peach-toned cream which spreads effortlessly across the skin and is easily absorbed, leaving the skin surface feeling soft, smooth and moist." Acti-Vita is presented in a golden jar with a white and gold label, packaged in a gold carton also labelled in white and gold. It comes in two sizes: 1 oz (£10 10s) and 2 oz (£16 16s) (Germaine Monteil (UK) Ltd, 17 Old Bond Street, London, W 1.)

Sundries

"Diddy" vacuum flask

By arrangement with Ken Dodd, the Diddymen from the BBC television series make their appearance as the surface design on a new 8 oz vacuum flask announced by the British Vacuum Flask Co Ltd. The new Diddy flask (9s 6d) is a colourful plastic flask with all four Diddy characters printed in red and black on a yellow ground, and is fitted with a screw stopper. The Diddy Flask is packed in cartons of six. Refill bottles (5s 6d) are also available (British Vacuum Flask Co Ltd, Wilson Road, Huyton, Liverpool).

Olive grooming-aid display

Ten fast-selling, sales-tested manicure and pedicure items are ideally displayed on a new revolving stand that takes up only 1 sq ft of counter space. Each item—sold under the Olive brand label—is individually carded and named to stimulate self-selection sales.

The ten items include four types of manicure scissors—one stainless steel—nail clippers, nail pliers, professional

tweezers and emery boards. One of the nail clippers is designed to catch the clippings in a plastic outer case. Selling prices range from 1s to 13s 6d.

The Olive Slimline grooming-aid display is supplied free in a package of 8 dozen items with a retail value of £26 5s. Cost to the retailer is £14 10s 6d plus £4 4s 6d purchase tax. Replacement items are available separately. (Harry Weinberger Ltd, Britannia House, 100 Drayton Park, London N 5.)

Perfumery sales switch

Sales in the United Kingdom of Camilli Albert and Laloue SA, Grasse, France, producers of fragrance raw materials, which have been handled for the past 16 years by Petley, Rubeck Ltd (and their predecessors P. T. Petley & Co Ltd) will be handled by the chemicals division of Pfizer Ltd, Sandwich, Kent, as from March 1.

The UK arrangements follow not only the pattern of integration of Camilli in certain other markets within the Pfizer International Organisation, but also coincide with the increased emphasis within the UK on the activities of Fritzsche Bros Inc of which Petley, Rubeck Ltd is an associated company.

Gardening aids

Raising new plants

A new concept of raising plants from cuttings with the aid of a soilless compost is the feature of Baby Bio seed and cutting compost kits. Each kit provides polythene covers to slip over a flower pot, making, in effect, a mini-greenhouse. Covers with securing bands are provided free inside each bag of Baby Bio seed and cutting compost. Instructions come on the bag.

There is also a kit for growing cuttings using polythene covers and Baby Bio seed and cutting compost. Both Baby Bio composts contain Irish peat blended with seaweed, balanced plant foods and essential trace elements. In addition, both contain an ingredient to ensure that the composts absorb water easily, even when they are semi-dry.

Baby Bio seed and cutting compost and Baby Bio potting compost are now available in colourful bags (3s, 7s 6d and 13s). The smallest bag will fill a normal sized seedbox or three flower pots. (Pan Britannica Industries Ltd, Britannia House, Waltham Cross, Herts.)

MARKET NEWS

Ipecacuanha prices edging up

London, February 4: Only the Costa Rican variety of ipecacuanha was being offered on the market for prompt delivery during the past week and with shippers unable to quote for forward delivery prices are tending upwards. New-crop buchu leaves on the other hand were being offered more freely from South Africa and the trend from the peak level prices of recent months continues downwards. Gentian was dearer by 15s cwt and balsam Peru by threepence lb. Hydrastis was reduced by sixpence lb and Continental valerian root by 40s cwt.

Supplies of Alexandria hand-picked senna pods are now extremely limited and the replacement position obscure. Mercury fell to £212 per flask of 76 lb (from £235).

Among essential oils Chinese peppermint for shipment rose by threepence lb while forward rates for citronella were adjusted upwards in Chinese and downwards for the Ceylon variety.

A manufacturer of light magnesium carbonate and of the light oxide has given notice to its customers that it will be ceasing their manufacture after June 30. Meanwhile higher rates for the pharmaceutical light grades have been brought into operation.

'Certor' P.V.C. Metric Medicals

★ excellent clarity

★ inexpensive

★ 1/9th weight of glass

★ virtually unbreakable

Macdonald of Manchester report an increasing demand for the remarkably glass-like 'CERTOR' P.V.C. Metric Medical. Since their introduction in early 1969, 'CERTOR' Metric Medicals are being used more and more by Pharmacists in place of the heavier, breakable glass bottle. 'CERTOR' Metric Medicals in clear and amber, are shaped to the new metric medical design and are available in 50, 100, 150, 200, 300 and 500 ml. sizes. Two standard screw closures fit the full range.

In addition to this unique range of medicals, Macdonalds can supply, as sole U.K. Distributor to pharmacy the 'Coplactic' polystyrene tablet bottles.

'CERTOR' P.V.C. Metric Medicals and 'Coplactic' tablet bottles have established that high quality plastic bottles are a sound commercial alternative to the heavier, traditional glass bottle.

The name 'CERTOR' on the base is your assurance of reliability.

Pharmacists requiring full details and samples of these bottles are requested to use the coupon included here, telephone Manchester or London or see their Macdonald Representative.

Post to Macdonald & Taylor Ltd.,
Portland Mill,
Ashton-under-Lyne, Lancs.

We would like full details, please, on

SITUATIONS VACANT

SALES EXECUTIVE

KINGSLEY AND KEITH (CHEMICALS) LIMITED

wish to appoint an alert and responsible Sales Executive, aged 26 - 35, with experience in dealing with the manufacturers in the PHARMACEUTICAL, COSMETIC or PESTICIDE Industries.

The successful applicant will be expected to develop sales of chemicals to the Cosmetic and Pesticide Industries and maintain sales to Pharmaceutical manufacturers with considerable independence and aggressiveness.

The position is based in Croydon but regular calling on the industry will be necessary for which purpose a car will be provided.

The salary is negotiable. There is a pension scheme available and three weeks holiday per year.

Please apply in confidence with full details to:

P. E. Duckworth,
Kingsley & Keith (Chemicals) Ltd.,
Suffolk House,
George Street,
CROYDON CR9 3QL.

An exceptional opportunity to join a young fast growing company selling Cosmetics and Toiletries to Chemists and Departmental Stores. We require ambitious enthusiastic salesmen with experience in this field.

Remuneration will be by negotiation based on experience. A starting salary of £1,300—£1,600 per annum plus commission on all sales. Superannuation Scheme. A company car is provided and expenses are paid.

- Areas (1) North Eastern Counties,
(2) North London
(3) Herts, Beds.

Applicants should write in detail to Box 1575

We need a man . . .

used to calling on hospitals, able to organise his own territory and control his own activities. He will be offering teaching programmes to Post Graduate centres and will be expected to discuss these intelligently with Clinical Tutors and consultants/lecturers.

Good salary, most excellent prospects. Write General Practitioner Studies, 11a Kings Road, Chelsea, London S.W.3.

PRODUCTION PHARMACIST

A pharmacist is required for the manufacture and control of quality of a range of pharmaceutical and allied products for the home and export markets. Some experience of the filling and packaging of these products is desirable. The Company belongs to the Reckitt & Colman Group and the position offered presents a good opportunity to a suitably qualified man. Preferred age 28 to 40. Applications should be addressed to:

**The Chairman,
Roberts' Croupline Ltd.,
Burnden Works,
Manchester Road,
BOLTON.**

WAREHOUSE MANAGER Zambia

Northern Drug Company (1968) Limited, Zambia's leading retail and wholesale pharmaceutical company, who are a subsidiary of the Booker McConnell Group, are looking for a Pharmacist to manage their central warehouse at Kabwe (formerly Broken Hill), Zambia.

The warehouse has an area of 13,000 sq. ft., deliveries average 60 tons per month and staff total between 50 and 60. The fixtures and construction are reasonably modern and the range of merchandise is similar to that found in a Chemist business in the U.K. It is planned to extend the warehouse area by 10,000 sq. ft. in the near future.

The successful applicant will be a pharmacist who has had at least 2 or 3 years experience as a warehouse manager. He will be offered employment on a renewable three year contract basis and will be eligible to join the company's pension scheme. He will have the opportunity to exercise considerable personal initiative and will be particularly competent in dealing with and organising labour. An attractive salary will be paid.

Other terms of service include:—

- ☐ 20% gratuity. ☐ Free housing
- ☐ Free passages. ☐ Generous leave.

Apply in writing please to:—

D. G. P. Taylor,
Bookers Shopkeeping Holdings Ltd.,
Bucklersbury House,
83, Cannon Street,
London, E.C.4.

Flourishing industry... birds-eye view

In the rich fertile acres of Ransom's farmlands, scores of medicinal and essential-oil bearing plants thrive to perfection under the devoted skill of specialist scientists. Processed and assayed with the same meticulous care in Ransom's laboratories, these plants yield superb products that fill the galenical warehouses of the world. Ransoms can also process your own materials, to conserve your capital and reduce your overheads — all in the strictest confidence. Ransoms is an entirely self-contained business, unconnected with any other firm in the industry.
